Student visa – available for part-time work (up to 20 hrs/week in term time) and full-time during vacations

PROFILE

Software developer based in London with production experience on Next.js/TypeScript products, AI-integrated web apps and Solidity smart contracts. Most recently a software development intern on BlueChip Technologies' AI team, shipping fixes and a security remediation on a live tax platform. I build and deploy end to end – including a contribution ledger built for a 200+ member cooperative – and I'm studying for a BSc in Information Technology and Business Information Systems at Middlesex University.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, Java, Solidity, SQL, HTML, CSS, Dart
Frontend:	React, Next.js (App Router), Tailwind CSS, Flutter
Backend & Data:	Node.js, FastAPI, REST APIs, Zod, PostgreSQL / Supabase, MongoDB, MySQL
AI:	LLM APIs (Groq / OpenAI), structured prompting, computer vision
Cloud & DevOps:	Vercel, Azure, GitHub Actions CI/CD, Git, Docker (familiar)
Security & Web3:	Foundry, Chainlink, dependency/CVE remediation, Burp Suite, Metasploit

EXPERIENCE

Software Development Intern (AI Team) | BlueChip Technologies Ltd, Lagos (Hybrid) Nov 2025 – Jul 2026

- Contributed to TaxRobot, a production Next.js/TypeScript tax platform: fixed a systemic missing API-version prefix across backend calls, repaired the forgot-password flow and resolved a middleware crash caused by environment misconfiguration
- Led a dependency security remediation: upgraded Next.js to patch a published CVE, migrated nine modules from validate.js to Zod schemas, removed an unused package carrying a critical transitive vulnerability and cleared Dependabot alerts – with no change to existing behaviour
- Single-handedly built the frontend for a bank RFI proposal – responsive, accessible UI delivered against the client brief
- Diagnosed a production issue where the frontend sent malformed JSON to the backend; raised and merged the fix via pull request

Web Developer Intern | Prodigy InfoTech (Remote) May – Jun 2024

- Delivered four front-end development tasks in HTML, CSS and JavaScript, published on GitHub (PRODIGY_WD_01–04)
- Worked in Git-based workflows and earned Prodigy InfoTech Web Development certification (Jun 2024)

Customer Service Manager | 24th Concept, Lagos 2022 – 2025

- Led the customer service team, owning escalations and client communication end to end
- Streamlined support processes and fed customer feedback into marketing and product decisions

PROJECTS

AGAPE Cooperative Ledger | Client project (delivered, in client review) – Next.js, TypeScript, Supabase

Live: ajo-record.vercel.app | GitHub: github.com/agent-mino/FRSC-Contribution-Tracker

- Built a contribution ledger for a 200+ member FRSC cooperative society, designed to replace monthly bank deduction spreadsheets with a single recomputed source of truth
- Designed an append-only Postgres ledger with trigger-maintained running balances; imports UBA/FCMB Excel schedules (SheetJS) and recomputes totals because source files contain real mismatches
- Made re-imports idempotent with stable import keys and added a duplicate-deduction guard with admin override; role-based access lets members see only their own balances

Academai – AI Academic Assistant | Next.js 16, TypeScript, Groq API

Live: academai-assistant.vercel.app | GitHub: github.com/agent-mino/Academai

- Full-stack app that summarises text, explains topics at three levels (ELI5 / High School / University) and generates quizzes by count and difficulty

- All LLM calls run server-side (no key exposed): Zod input validation, rate limiting, request-ID logging, structured prompting and a safety check that refuses harmful requests
- Markdown-rendered output, prompt presets and local request history; deployed on Vercel with CI/CD from GitHub

E-Library Admin Dashboard | Group project – Next.js 15, React 19, TypeScript, Tailwind CSS

GitHub: github.com/agent-mino/e-library-admin

- Built the admin dashboard for a team e-library platform: JWT sign-in with server-side session checks, book search, category filter and add/edit forms, and category and user management against the team's FastAPI + MongoDB REST API

Smart Contract Projects | Solidity, Foundry, Chainlink

GitHub: github.com/agent-mino

- DSC stablecoin (collateralised minting, liquidation, price feeds), Chainlink VRF raffle, FundMe crowdfunding and an on-chain SVG NFT – all tested with Foundry

Computer Vision Attendance System | Python, OpenCV, face_recognition (dlib), SQLite

GitHub: github.com/agent-mino/face-attendance-system

- Webcam check-in system: enrolls faces from several samples, matches each face to its nearest enrolment within a tolerance, and records one check-in per person per day with last-seen times; present/absent reports with CSV export, tested in CI

Earlier Web Projects

Live: bright-world.vercel.app

- **BrightWorld** – lighting-design marketplace UI (React) · **CurrenSee** – Flutter currency converter with MySQL and CurrencyLayer API

Ink Mind Autos | Freelance web & social

- Built and manage the website and Instagram/TikTok presence for a Lagos printing and branding business

EDUCATION

BSc Information Technology and Business Information Systems | Middlesex University, London *Sep 2026 – Sep 2027*

- Current modules include Business Intelligence (CST3340), Strategic Information Systems, Technological Innovations Management and Entrepreneurship

Advanced Diploma in Software Engineering (ADSE) | Aptech Learning, Lagos

2023 – 2025

- Java, Python, .NET, OOP, C, AI & machine learning, cloud computing, data science, networking and full-stack development

CERTIFICATIONS

- **Mastercard Cybersecurity Job Simulation** – Forage (Apr 2025)
- **Web Development** – Prodigy InfoTech (Jun 2024)
- **Bournvita Bootcamp** – Programming, AR, 3D Modelling, Robotics & AI
